

1. Goal

The **ResQ** project was created from an internal client need. Based on their long experience with the CarQ application, the client wanted to create an application that would facilitate the work of firefighters in providing assistance after traffic accidents.

resq.pl

Scope

- Web Development
- DevOps & Cloud
- Digital Product Design
- Quality Assurance

Key Challenges

Extracting data from external services

Aztec codes reader

Admin Panel

2. Solution

The main idea during the work on ResQ was that firefighters should be able to quickly and very easily retrieve relevant data about the car, among other things:
where the structural points are located,
where the airbags are located,
where the car's structure can be cut to safely extract the victim.

This crucial information may speeds up the work of firefighters and can save lives!

Technologies

- Ruby on Rails
- SCSS
- HTML5

3. Effect

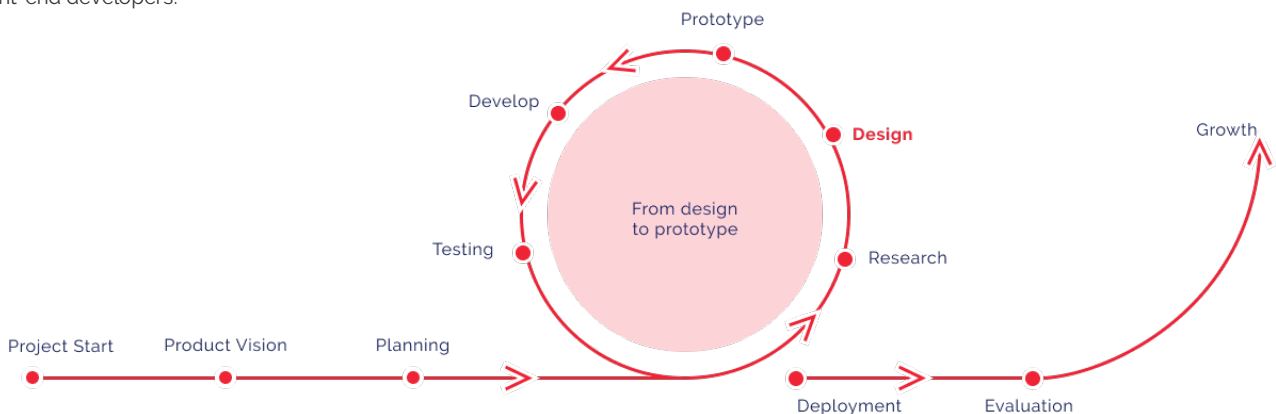

How it works? If the car is registered to the **ResQ** portal, firefighters entering only the registration number getting out a vehicle card with all the required information.

We encourage you to use ResQ.pl

Register your car now

Workflow

It's time to fully roll up our sleeves. UX/UI designers are architecting design and elements that will be later put to life by our front-end developers.

More than 2 millions reports

2,353,209 - until today October 10, 2020

We are happy to see that so many reports have already been prepared, but what's most important for us - performance of carQ wasn't wavered by the time.

About

We are glad that we can collaborate with people like Tomasz. To deliver working functionalities, one of the most important aspects is a plan - vision, but also a precise description on how the next tool should work, look like etc. We are happy to say that with carQ everything goes smooth, and everybody always knows what is the goal and what should be done in the project thanks to clarity and great communication.

Netkodo is a team of professionals who have cooperated with us on our key project - a complex and multidimensional automotive platform Carq.pl - since 2017.

The ability to determine client's needs and offer appropriate technologies that fit the business task is their supreme asset. I'm delighted to recommend Netkodo to any entrepreneur.
